Clouds ZApp

- Click on Zapp Shop option and click on CLOUDS

Spark cluster

- Leave default options and click on “Start”

CLOUDS Lab ZApp

This ZApp must be used during the laboratory activities of the CLOUDS course at Eurecom.

Combine the full power of a distributed Apache Spark cluster with Python Jupyter Notebooks.

Spark is configured in stand-alone, distributed mode. This ZApp contains Spark version 2.2.2.

To start clone the repository at <https://github.com/EURECOM-CLOUDS-COURSE> and open the notebook corresponding to the laboratory session you are in.

ZApp details

This ZApp is composed by the following services:

- 1 spark-master (1 essential)
 - Suggested memory allocation: 1.00 GiB
 - Suggested CPU core allocation limit: 1
- Image: `zapps/spark-master:10396`
- 2 spark-worker (1 essential)
 - Suggested memory allocation: 12.0 GiB
 - Suggested CPU core allocation limit: 3
- Image: `zapps/spark-worker:10396`
- 1 spark-jupyter (1 essential)
 - Suggested memory allocation: 12.0 GiB
 - Suggested CPU core allocation limit: 2
- Image: `zapps/spark-jupyter-notebook:10396`

The following persistent volumes will be available:

- `/mnt/workspace`: User workspace (RW)
- `/mnt/datasets` (RO)

Start-up parameters:

EXECUTION NAME:

spark-master

MEMORY ALLOCATION (GiB)

1.0

MINIMUM CORE ALLOCATION:

1

spark-worker

MEMORY ALLOCATION (GiB)

12.0

MINIMUM CORE ALLOCATION:

3

spark-jupyter

MEMORY ALLOCATION (GiB)

12.0

MINIMUM CORE ALLOCATION:

2

☐ Download JSON with these parameters for command-line execution

[Back to the ZApp shop](#)

Launch Jupyter

- Wait until “status” turns to running from queued
- Click “[Jupyter Notebook interface](#)” (internal link in EURECOM)
 - You can get to Spark master web i/f later from here

Detailed information for execution clouds (86711)

- Application name: clouds
- Owner: appuswam
- Time submitted: 11/13/2019, 9:28:50 PM
- Time started: 11/13/2019, 9:28:54 PM
- Time finished: not yet
- Status: **running**
- Will be killed at: 11/20/2019, 9:28:50 PM
- Actions: [Terminate](#)
- [Resource usage plots](#)

Endpoints

- [Jupyter Notebook interface \(internal link\)](#)
- [Spark master web interface \(http://192.168.47.8:34496/\)](#)

Services:

| ID | Name | Zoe status | Backend status | Host | Labels | Output logs | Errors |
|-------|----------------|------------|----------------|------|--------|----------------------|--------|
| 93953 | spark-master0 | active | started | bf8 | labs | open | None |
| 93956 | spark-jupyter0 | active | started | bf16 | labs | open | None |
| 93954 | spark-worker0 | active | started | bf20 | labs | open | None |
| 93955 | spark-worker1 | active | started | bf22 | labs | open | None |

Launch terminal

- Click on “Terminal” in Jupyter launcher

Clone and launch notebook

- For lab 3 on Dec 19, 2019
 - “git clone <https://github.com/EURECOM-CLOUDS-COURSE/kmeans.git>” in the terminal
- For lab 4 on Jan 9, 2020
 - “git clone <https://github.com/EURECOM-CLOUDS-COURSE/StochasticGradientDescent.git>” in the terminal
- You should see corresponding directory appear. Double click to enter the directory.
- Double click on ipynb file within directory to open up the notebook

Admin (same as before)

- Team up (upto 2 per group) or solo
- All labs based on Zoe – our cloud platform
 - Remote work possible: Zoe, notebooks accessible outside EURECOM
 - Beware: But spark admin UI accessible only in EURECOM network
- Submission deadline: **Jan 9 for lab 3, Jan 23 for lab 4**
- To submit
 - Download the ipython notebook locally
 - Email notebook with subject line: “***groupname* CLOUDS lab submission**”
 - Groupname: 4 chars of partner1’s lastname - 4 chars of partner2’s lastname
 - Ex: Alan Turing & John von Neumann = turi-neum

Wish you all a very merry Christmas and
a happy new year
